RESEARCH FOCUSES

Deep learning: Computer Vision (generative models, image classification, object detection/tracking), AI Safety (adversarial attack & defense, machine unlearning)
Optimization: sparse optimization for model/dataset compression, black-box optimization

EDUCATION

Ph.D. Candidate in Computer Science, Michigan State University Jan. 2021– Present.

M.S. in Electrical Engineering, Columbia University Aug. 2018– Dec. 2019

B.Eng in Electronic and Electrical Engineering, University of Sheffield Sep. 2015– July 2018

RESEARCH EXPERIENCE

Adversarial Unlearning for Diffusion Model Nov. 2023 - May. 2024

Supervisor: Sijia Liu (MSU)

- Explore the integration of AT with concept erasing (or machine unlearning) in DMs.
- Design a utility-retaining regularization using curated external retain prompt data to balance the trade-off between effective unlearning and high-quality image generation.
- Demonstrate that the text encoder achieves a better balance between unlearning performance and image generation utility compared to the UNet.
- **Publications**: [1]

Evaluation Framework for unlearned DMs. [**Research Intern@Intel**] May. 2023 - Oct. 2023

Supervisor: Sijia Liu (MSU), Xin Chen (Intel)

- Propose an evaluation framework built upon adversarial attacks (also referred to as adversarial prompts), in order to discern the trustworthiness of these safety-driven unlearned DMs.
- Develop a novel adversarial learning approach called UnlearnDiff that leverages the inherent classification capabilities of DMs to streamline the generation of adversarial prompts.
- Our research explores the (worst-case) robustness of unlearned DMs in eradicating unwanted concepts, styles, and objects, assessed by the generation of adversarial prompts.
- **Publications**: [2]

Model Training without Backpropogation Jan. 2023 - May. 2023

Supervisor: Sijia Liu (MSU)

- Propose a sparsity-induced ZO training protocol that extends the model pruning methodology using only finite differences to explore and exploit the sparse DL prior in CGE.
- Develop the methods of feature reuse and forward parallelization to advance the practical implementations of ZO training.
- **Publications**: [3]

Dataset Pruning for Transfer Learning Oct. 2022 - May. 2023

Supervisor: Sijia Liu (MSU)

- Propose two new dataset pruning (DP) methods, label mapping and feature mapping, for supervised and self-supervised pretraining settings respectively.
- **Publications**: [4]

Efficient 2D Temporal Video Grounding (TVG) [**Research Intern@Intel**] May.- Dec. 2022

Supervisor: Xin Chen (Intel)

- Propose an effective and efficient framework to train 2D TVG models, in which we leverage text-visual prompting (TVP) to improve the utility of sparse 2D visual features
- Achieve empirical success of our proposal to boost the performance of 2D TVG.
- **Publications**: [5]

Model Compression for Object Tracking [**DARPA IP2 Program**] Sept. 2021 - May. 2022

Supervisor: Sijia Liu (MSU)

Collaborator: Callie Hao(Georgia Tech), Shiyu Chang(UCSB), Zhangyang Wang(UT Austin)

- Reinforcement learning-based lightweight design for temporal data reduction.
- Saliency-guided spatial data reduction method is devised to eliminate uninformative pixels from both the input frames as well as the intermediate feature maps
- Utilizing kernel-wise pattern-aware model sparsity to achieve hardware-friendly model compression.
- **Publications**: [6]

Robustification of Black-Box ML Models by Zeroth-Order Optimization Jan.2021-Oct.2021

Supervisor: Sijia Liu (MSU) Collaborator: Jinfeng Yi(JD AI), Mingyi Hong(UMN), Shiyu Chang(UCSB)

- Formulate black-box defense problem through the lens of zeroth-order (ZO) optimization
- Propose scalable ZO optimization method to tackle defense challenge in high dimension
- **Publications**: [7]
