RESEARCH FOCUSES

Deep learning: Foundation Models, Computer Vision (generative models, image classification, object detection/tracking), AI Safety (adversarial attack & defense, machine unlearning)
Optimization: Sparsity learning for model/dataset compression, Black-box optimization

EDUCATION

Ph.D. Candidate in Computer Science, Michigan State University Jan. 2021– Present.
M.S. in Electrical Engineering, Columbia University Aug. 2018– Dec. 2019
B.Eng in Electronic and Electrical Engineering, University of Sheffield Sep. 2015– July 2018

RESEARCH EXPERIENCE

Multi-ID Injection for Personalized Diffusion Model May. 2024 - Nov. 2024
Supervisor: [Tiancheng Zhi](#) (ByteDance)

- Explore how to link face ID features with their corresponding locations using visual patches in conditioning images, ensuring better resemblance and accurate position control.
- Our proposed method enhances the efficiency of multi- ID image generation, by merely adding ID patches to the ControlNet conditioning image.
- Removal of the reliance on auxiliary segmentation models, requiring only a single point for ID position control, as opposed to segmented masks or head bounding boxes.
- **Publications:** [1]

Adversarial Unlearning for Diffusion Model

Nov. 2023 - May. 2024

Supervisor: [Sijia Liu](#) (MSU)

- Explore the integration of AT with concept erasing (or machine unlearning) in DMs.
- Design a utility-retaining regularization using curated external retain prompt data to balance the trade-off between effective unlearning and high-quality image generation.
- **Publications:** [2]

Evaluation Framework for unlearned DMs. [Research Intern@Intel] May. 2023 - Oct. 2023Supervisor: [Sijia Liu](#) (MSU), [Xin Chen](#) (Intel)

- Propose an evaluation framework built upon adversarial attacks (also referred to as adversarial prompts), in order to discern the trustworthiness of these safety-driven unlearned DMs.
- Develop a novel adversarial learning approach called UnlearnDiff that leverages the inherent classification capabilities of DMs to streamline the generation of adversarial prompts.
- **Publications:** [3]

Machine Unlearning for LLM

Feb.- Sep. 2024

Supervisor: [Sijia Liu](#) (MSU)

- Develop a second-order unlearning framework, termed SOUL, built upon the second-order clipped stochastic optimization (Sophia)-based LLM training method.
- **Publications:** [4]

Memory-Efficient LLM Fine-Tuning

Oct. 2023 - April. 2024

Supervisor: [Tianlong Chen](#) (UNC)

- Expands the exploration to a wider array of ZO optimization techniques, through a comprehensive benchmarking study across five LLM families (Roberta, OPT, LLaMA, Vicuna, Mistral)
- **Publications:** [5]

Model Training without Backpropogation

Jan. 2023 - May. 2023

Supervisor: [Sijia Liu](#) (MSU)

- Propose a sparsity-induced ZO training protocol that extends the model pruning methodology using only finite differences to explore and exploit the sparse DL prior in CGE.
- **Publications:** [6]

Efficient 2D Temporal Video Grounding (TVG) [Research Intern@Intel] May.- Dec. 2022Supervisor: [Xin Chen](#) (Intel)

- Propose an effective and efficient framework to train 2D TVG models, in which we leverage text-visual prompting (TVP) to improve the utility of sparse 2D visual features
- **Publications:** [7]

Model Compression for Object Tracking [DARPA IP2 Program] Sept. 2021 - May. 2022Supervisor: [Sijia Liu](#) (MSU)Collaborator: [Callie Hao](#)(Georgia Tech), [Shiyu Chang](#)(UCSB), [Zhangyang Wang](#)(UT Austin)

- Saliency-guided spatial data reduction method is devised to eliminate uninformative pixels from both the input frames as well as the intermediate feature maps
- Utilizing kernel-wise pattern-aware model sparsity to achieve hardware-friendly model compression.
- **Publications:** [8]
